**Subject:** aluminum in Discovery Bay

Hi Loree',

Looking back in our files, we haven't sampled aluminum recently. We do have measures from some historical stations (1989-1993, 2000, 2005), but not in Discovery Bay. Our most recent DB sampling was in 2002-2003 and in 2013, and metals tested for included...arsenic, cadmium, chromium, copper, lead, mercury, nickel, selenium, silver, and zinc. All were below sediment quality cleanup objective values. The report links are here: [2002-2003](#), [2013](#).

Let me know if you have any questions or would like the raw data (or you can pull it from EIM).

Maggie
